

Ladak II PRODUCT BENEFITS

Ladak II alfalfa is specialized for use on rangeland and dryland pastures from the northern plains to the winter hardy intermountain areas of the west where rainfall is limited for extended periods of time. Developed from plants selected out of a 27 year old stand of Ladak in eastern Washington, Ladak II has the drought tolerance of Ladak with improved disease and nematode resistance for increased persistence and adaption to a wider range of soil conditions.

- Developed Directly From Ladak
- Excellent drought tolerance
- Adapted to variable soil conditions
- Very winter hardy and persistent
- Superior forage yield when compared to Ladak

Resistance Ratings	
Fusarium Wilt	Highly Resistant
Verticillium Wilt	Moderately Resistant
Bacterial Wilt	Highly Resistant
Anthrachnose Race I	Moderately Resistant
Phytophthora Root Rot	Resistant
Stem Nematode	Resistant
N Root Knot Nematode	Highly Resistant
