

FSG 229CR PRODUCT BENEFITS

FSG 229CR alfalfa is a highly persistent, rhizomatous alfalfa specialized for utilization in dry land pastures. As the alfalfa stand matures, rhizomes develop forming new crowns which increase stand density. FSG 229CR excels in both hay and pasture type production and expresses a branch rooted trait that allows the plant better tolerance to wet soil conditions.

- Highly persistent Creeping Rooted alfalfa
- Great for dryland pasture settings
- Excellent drought and wet soil tolerance
- Multipurpose – great for haying or pasturing
- Tough and widely adapted alfalfa

Resistance Ratings	
Bacterial Wilt	Highly Resistant
Verticillium Wilt	Highly Resistant
Fusarium Wilt	Highly Resistant
Anthracnose Race I	Highly Resistant
Phytophthora Root Rot	Highly Resistant
Aphanomyces Race I	Resistant
