

FSG 408DP PRODUCT BENEFITS

FSG 408DP alfalfa has been bred for deep set crowns with 61% of the crowns 1 to 1 1/2 inches below the soil surface. The deep set crown trait helps insulate the crown in severe winter weather and protect the crown from animal and equipment traffic. This versatile variety is ideal for 3 to 4 cut management systems where wheel traffic is a concern or for intensive livestock grazing. With high hay yields, great forage quality and an excellent disease and insect resistance package, FSG 408DP gives you the flexibility to optimize your management decisions.

- Dual purpose alfalfa – hay or graze
- Wide, deep-set crowns
- Stands up to wheel traffic pressure
- High yield potential
- Superior winterhardiness and persistence

Resistance Ratings

Bacterial Wilt	Highly Resistant
Verticillium Wilt	Resistant
Fusarium Wilt	Highly Resistant
Anthrachnose (Race I)	Highly Resistant
Phytophthora Root Rot	Highly Resistant
Aphanomyces Race I	Resistant
Pea Aphid	Resistant
Stem Nematode	Resistant
Root Knot Nematode	Highly Resistant
